

Instructions for Musculoskeletal system – traumatology

Head: prof. dr. Matej Cimerman, dr. med.

Lessons for subject »Musculoskeletal system – traumatology« consist of lectures and seminars. Students will get the knowledge of:

- most frequent injuries of the musculoskeletal system (MS),
- how to recognise MS injuries from history data, diagnostic examinations,
- learn to recognise and treat urgent situations in MS injuries,
- currently accepted treatment of MS injuries.

One of important goals is to understand how MS injuries affect the whole organism also from psycho-social point of view.

Attendance at seminars is **mandatory**. Students must be properly dressed in a white coat because seminars are taking part at traumatology wards. Chair of Surgery provides a list of attendance to the students, which must be signed from a tutor at the seminar.

Each student should provide a fulfilled list of seminar attendance to the Chair of Surgery before the date of examination. Without that, the student **cannot** attend the final examination of the subject Musculoskeletal system.
